

Press Release:
BULK INSPECTION COMPLETE

Bickenbach, Germany, May 2, 2014: At interpack, scanware electronic GmbH is introducing a turnkey solution for bulk inspection. The station moves the products via vibration, undertakes product inspection and a precise product count.

For a number of years, scanware has been offering product inspection on tablet counters and feeding systems. This year, scanware is presenting a standalone solution. The machine with 15 lanes can move up to 360,000 units per hour; the inspection keeps up with the feeder. Apart from product inspection as in blisters, an algorithm needs to separate the products. Furthermore, scanware has improved the visualisation of bulk products showing product minimal sizes which is particularly user-friendly. The inspection system can also be installed on bottle fillers and tablet counters.

Apart from feeding and inspection, the unit also includes a counter which uses a turnout for precise results. Also, this enables the exchange of the product box whilst the machine is running. The station stands on wheels and is easy to clean.

scanware electronic GmbH is a privately owned company operating on an international scale. As an independent manufacturer we develop product and code inspection systems for installation on pharmaceutical packaging equipment. With 25 years of experience, scanware products are tailored to individual needs of customers, highly specialized and fully compliant with GAMP requirements. Almost 2000 installations across the globe establish scanware as a renowned supplier of supreme quality equipment to all major manufacturers.
