

Press Release:  
**CODE INSPECTION EVEN SIMPLER**

**Bickenbach, Germany, May 2, 2014:** The Code Inspection by scanware electronic GmbH offers precise error diagnosis, fast evaluation and enormous user-friendliness. Now, the teach-in can be configured to speed up the process even more.

A number of coding standards and tremendous flexibility cause a host of varieties. To make teach-in simpler, it can be configured and thus shortened. First of all, the options that are relevant for the task are chosen. For example, if barcodes need to be inspected, the user does not have to go through steps for plain text recognition. Afterwards, the user only sees options relevant to the current inspection task.

Thus, the teach-in is completed incredibly fast. After the selection of the inspection type and the automatic detection of the object position, evaluation can start. Since on the LYNX surface, a number of code readers and cameras can be operated simultaneously, the overall line efficiency is increased.

scanware electronic GmbH is a privately owned company operating on an international scale. As an independent manufacturer we develop product and code inspection systems for installation on pharmaceutical packaging equipment. With 25 years of experience, scanware products are tailored to individual needs of customers, highly specialized and fully compliant with GAMP requirements. Almost 2000 installations across the globe establish scanware as a renowned supplier of supreme quality equipment to all major manufacturers.
