

scanware Introduces LYNX-SPECTRA to Chinese Market

Bickenbach, August 20, 2015: For the first time, scanware electronic GmbH is exhibiting its inspection systems in China at ChinaPharm. Within the German Pavilion, the manufacturer of vision inspection systems for pharmaceutical packaging lines is presenting the colour product inspection LYNX-SPECTRA.

The system inspects products such as tablets, sugar-coated tablets, soft and hard gel capsules for correctness in respect to colour, size, position as well as broken products and double fillings. Furthermore, the system offers a number of statistical and safety features to increase safety and productivity, for example

feeder statistics, visualization of consecutive errors and access control. The guided menu enables speedy teach-ins and simple adjustment of illumination settings which are then saved for each format. This enables homogenous, reproducible optical surroundings. The system is also available in black-and-white, high-resolution and for post-seal inspection.

Hall W5, Booth 5D14

scanware electronic GmbH is a privately owned company operating on an international scale. As an independent manufacturer we develop product and code inspection systems for installation on pharmaceutical packaging equipment. With 25 years of experience, scanware products are tailored to individual needs of customers, highly specialized and fully compliant with GAMP requirements. More than 2000 installations across the globe establish scanware as a renowned supplier of supreme quality equipment to all major manufacturers.
