

scanware trade fair team successfully completed Pharmapack 2019

Bickenbach, Germany, 08/02/2019: The appearance of scanware electronic GmbH at Pharmapack this year was characterized by smart serialization systems. The image processing company presented its solutions and know-how at its booth from February 6th to 7th together with the French distributor DARRØN.

Starting from tomorrow Directive 2011/62/EU will be in force. Packaging for prescription-only medicines must now have a unique serial number in accordance with this directive. As an integrated system provider with 30 years of company history, scanware has in-depth knowledge of pharmaceutical packaging lines and offers a wide range of flexible and modular systems for serialization, aggregation, and tamper-proof labelling.

The stream of visitors at the booth showed that serialization is still a burning issue. "The response to our exhibited system LYNX-CAPA MV was very good and shows that there is still a great need for expert advice on the topics of complete traceability and counterfeit protection of products," explains scanware area sales manager Franco Quintana. "Our serialization solutions meet the latest legal requirements. In combination with our long-time experience and our customer-centric consulting approach, we are able to implement serialization projects efficiently and in compliance with guidelines."
